USE CASE

Multi-Tenant Property Upgrade

Tenants running their own cables, competing internet providers, no consistency, we've seen it everywhere. We replace the mess with one unified system that gives every tenant a private, reliable connection.

1
Unified system for the whole property

0
Competing providers left behind

24/7
Monitoring & support

The Challenge with Multi-Tenant Upgrades

Years of tenants installing their own service leaves a property with mismatched cabling, competing ISPs, and no clear ownership of any of it. Whoever inherits the building inherits the mess, and there's rarely a clean way to unwind it without disrupting everyone still operating inside.

What We Deliver

Legacy Cabling Cleanup
We remove and replace the patchwork with clean, labeled, documented infrastructure.

Private Tenant Networks
Each tenant gets a secure, isolated network on shared building infrastructure.

Building-Wide WiFi
Reliable, professionally tuned wireless coverage across every floor and common area.

Security Camera Systems
Indoor and outdoor coverage with remote viewing, alerts, and secure recording.

Access Control
Keyless entry with user-based permissions and full activity logs.

24/7 Monitoring
We watch the system continuously, so issues get caught before tenants notice.

Why It Works

Instead of patching the same issues tenant by tenant, we roll out one unified system across the whole property in a single coordinated upgrade. Every tenant gets a private, reliable connection, and you get one system to manage instead of a dozen.

How It Works

1. **We audit the existing mess**
   A walkthrough of current cabling, providers, and equipment across the property.

2. **We design one unified system**
   Network, WiFi, cameras, and access control, built to replace the patchwork.

3. **We roll it out tenant by tenant**
   Phased cutover means no tenant loses connectivity during the transition.

4. **We manage everything ongoing**
   Monitoring, support, and updates are on us. You don't chase vendors or troubleshoot.

Built to Own, Not Rent

Our infrastructure runs on a perpetual license model. You own the system outright and pay us for management, not for the hardware's right to keep functioning. No annual software licensing fees and no per-device subscriptions layered on top.

A Simple Monthly Model

- Predictable monthly pricing based on building size and system needs
- 24/7 monitoring and support included in every plan
- No large upfront cost; purchase equipment outright or finance it at a low monthly rate
- New tenants activate quickly, with no new cabling or setup required

This Fits If You're

Inheriting a Property with Mismatched Systems

Fielding Tenant Complaints About WiFi

Coordinating Too Many ISPs

Preparing a Property for Sale or Refinance

Consolidating Vendor Contracts

Upgrading Before a Major Lease Renewal
